Environment

This page hosts a collection of pages related to the computing environment, such as service and security overviews, how to use various facilities, and descriptions of process-specific IT environments (e.g., one suitable for grant applications).

U-M Health System clinicians, staff, and students primarily rely on the Health Information Technology & Services (HITS) group to meet their IT needs. HITS addresses computing needs, sometimes in conjunction with campus-wide IT partners like ITS, within the Michigan Medicine environment. HITS includes many specialist support groups which provide application development, account management, computing packages, back-up services, and database development within their support areas.

### Topics

- Encryption - UMHS Policy 1-04-502 Guide
- Information Assurance - Inventory Management Project
- Information for Incoming Medical Students
