Windows - Kiosk

- Users must have Level-2 accounts to log in (i.e., unlock the screen)
- Typically deployed in areas that require fast logins for short periods of use
- Logins unlock the screen to a shared desktop session using a service account called Kiosk-User.
- The shared desktop session is very secure and has functional limitations
- Preconfigured with an auto-logoff timer that refreshes the shared desktop session
- GreenIT is enabled by default
- Maintenance will automatically run daily
- Patches and other updates require reboots; most of these reboots are initiated via Maintenance
